

## ETC4500/ETC5450 Advanced R programming

Week 11: Rewriting R code in C++

## Outline

- 1 Motivation
- The first steps with Rcpp
- 3 Some stats with RcppArmadillo
- 4 An R package with compiled code

#### **About me**

#### Tomasz Woźniak

- senior lecturer in econometrics at the unimelb
- econometrician: Bayesian time series analyst
- develops methods for applied macro research
- loves cycling, yoga, books, volunteering, contemporary theatre, music, and arts
- I am nice!

#### **About me**

#### Tomasz Woźniak

- **R** enthusiast and specialised user for 17 years
- associate editor of the R Journal
- author of R packages bsvars and bsvarSIGNs

## **Outline**

- 1 Motivation
- 2 The first steps with Rcpp
- 3 Some stats with RcppArmadillo
- 4 An R package with compiled code

#### **Motivations**

- Compiled code written in C++ runs much faster than interpreted code in R
- Coding in C++ for R applications has always been possible
- It requires:
  - writing C++ code
  - compiling it, and
  - linking it to R
- Difficulties:
  - tedious object-oriented programming
  - necessity of assuring object compatibility
  - Benefits are great, but the cost was too high

#### **Motivations**

- **Rcpp** is a family of packages by Dirk Eddelbuetel et al. facilitating the application of **C++** in **R**
- An interface for communication between **R** and **C++**
- Greatly simplifies the workflow
- Easier to benefit from the best of the two worlds:
  - C++ programs are pre-compiled assuring fast computations perfect for writing functions
  - R code is interpreted and dynamic: perfect for data analysis

## **Objectives for this session**

- to facilitate working with C++ in R applications
- to perform a sequence of exercises
- to focus on:
  - basic programming structures
  - functional programming
  - object types: scalars, vectors, matrices, lists, etc.
  - linear algebra
  - statistical distributions

#### **Materials for this session**

- Lecture slides
- **C++** scripts:
  - nicetry.cpp
  - ▶ nicelr.cpp
  - nicelist.cpp
  - nicerig2.cpp

## **Learning resources**

- This session!
- vignettes: for packages Rcpp and RcppArmadillo
- online resources:
  - Armadillo library documentation
  - RcppGallery
  - stackoverflow.com tag:rcpp
- François, R., Optimizing R Code with Rcpp on datacamp
- Tsuda, M., Rcpp for everyone
- Eddelbuettel, D., Seamless R and C++ Integration with Rcpp

## **Outline**

- 1 Motivation
- 2 The first steps with Rcpp
- 3 Some stats with RcppArmadillo
- 4 An R package with compiled code

## The first steps with Rcpp

#### Consider the following **C++** applications in **R**:

- Define a C++ function in an R script
  - promptly available for fast computations
- Develop a C++ function in a .cpp file
  - perfect for developing, testing, and benchmarking
- Use a function from a \*.cpp file in **R** computations
  - perfect for elaborate projects
- Develop an R package using C++ code
  - perfect for sharing your work with the community

## Define a C++ function in an R script

```
Rcpp::cppFunction('
  DataFrame nicetry (int n) {
    NumericVector v = rnorm(n);
    IntegerVector x = seq_len(n);
    LogicalVector y = v > 0;
    CharacterVector z(n, "nice");
    return DataFrame::create(_["v"] = v, _["x"] = x, _["y"] = y, _["z"] = z);
}
')
nicetry(2)
```

## Develop a C++ function in a nicetry.cpp file

#### A \*.cpp file sample contents:

```
#include <Rcpp.h>
using namespace Rcpp;
// [[Rcpp::export]]
List nicetry (int n) {
  NumericVector v = rnorm(n);
  IntegerVector x = sea len(n):
  Logical Vector y = v > 0;
  CharacterVector z(n, "nice");
  return List::create( ["v"] = v, ["x"] = x, ["v"] = v, ["z"] = z);
/*** R
nicetrv(2)
*/
```

## Develop a C++ function in a nicetry.cpp file

#### The script includes:

■ Rcpp library and namespace declarations (skip: Rcpp::)

```
#include <Rcpp.h>
using namespace Rcpp;
```

Rcpp marker to export the nicetry function to R

```
// [[Rcpp::export]]
```

sample R script

```
/*** R
nicetry(2)
*/
```

## Develop a C++ function in a nicetry.cpp file

#### The script includes:

#### the function definition

## Develop a C++ function in a .cpp file

Develop a C++ function that creates a Tx3 matrix with:

- $\blacksquare$  an integer  $\top$  as the only argument
- a constant term column: NumericVector i(n, 1.0);
- $\blacksquare$  a linear trend  $t \bar{t}$  column
- lacksquare a quadratic trend  $(t-ar{t})^2$  column

where t goes from 1 to T, and  $\bar{t}$  is the mean of sequence t.

- create NumericVectors and assemble as NumericMatrix
- use functions cumsum, mean, pow, and cbind.

Get some help HERE.

#### Use a function from a nicelist.cpp file in R

nicelist.cpp file contents:

```
#include <Rcpp.h>
using namespace Rcpp;
// [[Rcpp::export]]
List nicelist (int n) {
 NumericVector p = rnorm(n);
 NumericVector s(n):
 for (int i=0; i<n; i++) {
    s[i] = pow(p[i], 2);
 return List::create(_["p"] = p, _["s"] = s);
```

## Use a function from a nicelist.cpp file in R

■ R script using the function from nicelist.cpp:

```
Rcpp::sourceCpp("nicelist.cpp")
nicelist(3)

$p
[1] -1.357  0.417  2.281

$s
[1] 1.842  0.174  5.205
```

## Develop a C++ function in a .cpp file

Consider a Gaussian random walk:

$$y_t = y_{t-1} + \varepsilon_t, \qquad \varepsilon_t \sim N(0, 1), \qquad y_0 = 0$$

Develop a **C++** function that:

- $\blacksquare$  has an integer  $\top$  as the only argument
- returns a T-vector with Gaussian random walk

Hint: use functions rnorm and cumsum.

## **Outline**

- 1 Motivation
- 2 The first steps with Rcpp
- 3 Some stats with RcppArmadillo
- 4 An R package with compiled code

## Some stats with RcppArmadillo

- Data objects from Rcpp have limited functionality
- **Armadillo** is a **C++** library for linear algebra that
  - provides a rich set of functions
  - has a simple and intuitive syntax
  - includes fast linear algebra routines, and
  - fast random number generators
  - has fantastic documentation
- RcppArmadillo is a simplified interface with Armadillo
  - allows seamless integration with Rcpp
  - easily passes data between R and C++

## Some stats with RcppArmadillo: IG2 distribution

Sampling random draws from an inverted gamma 2 distribution.

A positive random variable  $\sigma^2$  following an inverted gamma 2 distribution with positive scale s and shape  $\nu$  parameters is denoted by:

$$\sigma^2 \sim \mathsf{IG2}(\mathsf{s}, \nu)$$

- **11** Generate random draw *x* from  $\chi^2(\nu)$
- Return  $\frac{s}{x}$

## Some stats with RcppArmadillo: IG2 distribution

#### Contents of a nicerig2.cpp file:

```
#include <RcppArmadillo.h>
// [[Rcpp::depends(RcppArmadillo)]]
using namespace arma;
// [[Rcpp::export]]
vec nicerig2 (
  const int n,
 const double s.
 const double nu
 vec rig2 = s / chi2rnd( nu, n );
 return rig2;
/*** R
nicerig2(2, 1, 1)
```

## Develop a C++ function in a .cpp file

Consider a Gaussian random walk:

$$y_t = y_{t-1} + \varepsilon_t, \qquad \varepsilon_t \sim N(0, 1), \qquad y_0 = 0$$

Develop a **C++** function using **RcppArmadillo** that:

- $\blacksquare$  has an integer  $\top$  as the only argument
- returns a T-vector of type vec with Gaussian random walk

Get some help HERE.

## Some stats with RcppArmadillo: linear regression

#### Contents of a nicelr.cpp file:

```
#include <RcppArmadillo.h>
// [[Rcpp::depends(RcppArmadillo)]]
using namespace arma;
// [[Rcpp::export]]
vec nicelr (vec v, mat x) {
  vec beta hat = solve(x.t() * x, x.t() * v);
  return beta_hat;
/*** R
x = cbind(rep(1,5),1:5); y = x %*% c(1,2) + rnorm(5)
nicelr(y, x)
*/
```

## Some stats with RcppArmadillo: linear regression

Extend the nicelr function to return the covariance:

$$\widehat{Cov}\left[\hat{\beta}\right] = \hat{\sigma}^2 \left(X'X\right)^{-1}$$
, where  $\hat{\sigma}^2 = \frac{1}{T} \left(Y - \hat{\beta}X\right)' \left(Y - \hat{\beta}X\right)$ 

- don't adjust the arguments
- return beta\_hat and cov\_beta\_hat in a list

Get some help HERE.

Hint: use functions inv\_sympd and .n\_elem.

## Some stats with RcppArmadillo: Simulation smoother

Additional resources!

Have a look at my article on Simulation Smoother using RcppArmadillo at Rcpp Gallery.

## **Outline**

- 1 Motivation
- 2 The first steps with Rcpp
- 3 Some stats with RcppArmadillo
- 4 An R package with compiled code

#### Run the following code in **R**:

RcppArmadillo::RcppArmadillo.package.skeleton("nicepackage")

Note: this function has a different effect if package **pkgKitten** is installed.

DESCRIPTION includes necessary dependencies

```
Imports: Rcpp (>= 1.0.14)
LinkingTo: Rcpp, RcppArmadillo
```

NAMESPACE includes dynamic library definition and inports

```
useDynLib(nicepackage, .registration=TRUE)
importFrom(Rcpp, evalCpp)
```

- **C++** code lives in src/
  - src/Makevars files specify compilation flags
  - src/Makevars.win files specify compilation flags for Windows
  - analyse sample src/\*.cpp file
  - files src/RcppExports.cpp and R/RcppExports.R are generated automatically by running Rcpp::compileAttributes()
  - analyse R wrappers to C++ functions in R/RcppExports.R

Create an **R** package with compiled code following the steps from repository donotdespair/15steps2nicepackage

- Read the README file
- download file nicepackage.R
- follow the instructions in **R**

#### What's next?

- Keep programming in C++ for R applications
- Reach out for help
- Read the documentation of the C++ libraries you're about to use
- Study the Rcpp family of packages
- Study openMP to facilitate parallel computing

# Rewrite all your code in Rcpp! Nice!
